

WHAT IS CLAIMED IS:

1. A user's request reflecting design system for timely and accurately reflecting users' requests on a product, comprising:

design data publicizing means for publicizing
5 design data to users through a computer network;

correction data receiving means for receiving and storing correction data as said design data corrected by a user through said computer network; and

10 design assisting means for reflecting said correction data received by said correction data receiving means on product design.

2. The user's request reflecting design system as set forth in claim 1, wherein

said design data is three-dimensional data.

3. The user's request reflecting design system as set forth in claim 1, wherein

said design data publicizing means including public design data prepared in advance to be
5 publicized among said design data,

an editing program file for editing said public design data, and

a design data publicizing processing unit responsive to a request from a terminal connected to

10 said computer network for transferring said public
design data and said editing program file to said
terminal.

4. The user's request reflecting design system as
set forth in claim 1, wherein

 said design data publicizing means including
 public design data prepared in advance to be
5 publicized among said design data,

 an editing program file for editing said public
design data, and

 a design data publicizing processing unit
responsive to a request from a terminal connected to
10 said computer network for transferring said public
design data and said editing program file to said
terminal, and wherein

 said editing program file enables editing of
three-dimensional data.

15

5. The user's request reflecting design system as
set forth in claim 1, wherein

 said correction data receiving means including
 a data base for registering said correction data,

5 and

 a received mail processing unit for receiving an
electronic mail to which said correction data is
attached and registering and storing said correction

data in said data base.

10

6. The user's request reflecting design system as set forth in claim 1, wherein

said design data publicizing means including public design data prepared in advance to be publicized among said design data,

5

an editing program file for editing said public design data, and

a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal, and

10

said correction data receiving means including a data base for registering said correction data, and

15

a received mail processing unit for receiving an electronic mail to which said correction data is attached and registering and storing said correction data in said data base.

20

7. The user's request reflecting design system as set forth in claim 1, wherein

said correction data receiving means including a data base for registering said correction data,

5

and

a received mail processing unit for receiving an electronic mail to which said correction data is attached and registering and storing said correction data in said data base,

10

said received mail processing unit

classifying said correction data attached and registering said correction data in said data base based on personal information of a user recited in said electronic mail.

15

8. The user's request reflecting design system as set forth in claim 1, wherein

said design data publicizing means including public design data prepared in advance to be publicized among said design data,

5

an editing program file for editing said public design data, and

a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal, and

10

said correction data receiving means including a data base for registering said correction data, and

15

a received mail processing unit for receiving an electronic mail to which said correction data is

20

25

5

5

10

in creation of said design data by said design

assisting means, said correction data registered in said data base is used.

11. A user's request reflecting design method of timely and accurately reflecting users' requests on a product, comprising the steps of:

publicizing design data to users through a computer network;

receiving correction data as said design data corrected by a user through said computer network; and reflecting said correction data received on product design.

12. The user's request reflecting design method as set forth in claim 11, wherein

said design data publicizing step including the step of

in response to a request from a terminal connected to said computer network, transferring public design data prepared in advance to be publicized among said design data and an editing program file for editing said public design data to said terminal.

13. The user's request reflecting design method as set forth in claim 11, wherein

said correction data receiving step including the step of

5

receiving an electronic mail to which said
correction data is attached and registering said
correction data in a data base for registering said
correction data.

14. The user's request reflecting design method as
set forth in claim 11, wherein

said design data publicizing step including the
step of

5

in response to a request from a terminal
connected to said computer network, transferring public
design data prepared in advance to be publicized among
said design data and an editing program file for editing
said public design data to said terminal, and

10

said correction data receiving step including the
step of

15

receiving an electronic mail to which said
correction data is attached and registering said
correction data in a data base for registering said
correction data.

15. The user's request reflecting design method as
set forth in claim 11, wherein

said correction data receiving step including the
steps of

5

receiving an electronic mail to which said
correction data is attached, and

classifying said correction data attached and
registering said correction data in said data base based
on personal information of a user recited in said
electronic mail.

16. The user's request reflecting design method as
set forth in claim 11, wherein

said design data publicizing step including the
step of

in response to a request from a terminal
connected to said computer network, transferring public
design data prepared in advance to be publicized among
said design data and an editing program file for editing
said public design data to said terminal, and

said correction data receiving step including the
step of

receiving an electronic mail to which said
correction data is attached, classifying said correction
data attached and registering said correction data in
said data base based on personal information of a user
recited in said electronic mail.

17. A server of a user's request reflecting design
system for timely and accurately reflecting users'
requests on a product, comprising:

design data publicizing means for publicizing
design data to users through a computer network; and

correction data receiving means for receiving
correction data as said design data corrected by a user
through said computer network and storing said
correction data so as to be usable by design assisting
means for reflecting said correction data on product
design.

18. The server of a user's request reflecting design
system as set forth in claim 17, wherein

said design data publicizing means including
public design data prepared in advance to be
publicized among said design data,

an editing program file for editing said public
design data, and

a design data publicizing processing unit
responsive to a request from a terminal connected to
said computer network for transferring said public
design data and said editing program file to said
terminal.

19. The server of a user's request reflecting design
system as set forth in claim 17, wherein

said correction data receiving means including
a data base for registering said correction data,

and

a received mail processing unit for receiving an
electronic mail to which said correction data is

attached and registering and storing said correction data in said data base.

10

20. The server of a user's request reflecting design system as set forth in claim 17, wherein

said design data publicizing means including public design data prepared in advance to be publicized among said design data,

5

an editing program file for editing said public design data, and

a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal, and

10

said correction data receiving means including a data base for registering said correction data,

15

and

a received mail processing unit for receiving an electronic mail to which said correction data is attached and registering and storing said correction data in said data base.

20

21. The server of a user's request reflecting design system as set forth in claim 17, wherein

said correction data receiving means including a data base for registering said correction data,

5 and

a received mail processing unit for receiving an electronic mail to which said correction data is attached and registering and storing said correction data in said data base,

10 said received mail processing unit

classifying said correction data attached and registering said correction data in said data base based on personal information of a user recited in said electronic mail.

15

22. The server of a user's request reflecting design system as set forth in claim 17, wherein

said design data publicizing means including
public design data prepared in advance to be
publicized among said design data,

5

an editing program file for editing said public design data, and

a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal, and

10

said correction data receiving means including
a data base for registering said correction data,

15 and

a received mail processing unit for receiving an

electronic mail to which said correction data is
attached and registering and storing said correction
data in said data base,

20

said received mail processing unit
classifying said correction data attached and
registering said correction data in said data base based
on personal information of a user recited in said
electronic mail.

25

23. The server of a user's request reflecting design
system as set forth in claim 17, wherein

said design data publicizing processing unit
including

5

information entry selecting means allowing a user
to select either information entry in the form of a menu
or transfer of said public design data and said editing
program file.
